
(a) WB-incidence memory
Logical failure probability
Data-noise probability p
$L = 3$
$L = 4$
$L = 5$
$L = 6$
zero failures
(b) Circuit-level gauging
Logical failure probability
Noise strength p (10^{-3})
$d = 3$
$d = 5$
$d = 7$
$d = 9$
$d = 11$
