(a) From fault distance to space

$d = \Theta(f), \qquad N = \Theta(\sqrt{f})$

layer code: $d = \Theta(N^2)$, $K = \Theta(N)$, $n = \Theta(N^3)$

$K = \Theta(\sqrt{f}), \qquad n = \Theta(f^{3/2})$

pack K sites per cell: $(W/K)\, n + (B_f + 1)\, n$

$Q = O\big(Wf + (B_f + 1) f^{3/2}\big)$

(b) Bounded-aspect logical box
